

NKP A21 V.2

Series

Heater for heat exchanger freeze protection

Application

Duct electric heater for heat exchanger freeze protection by means of supply air preheating and supply air duct temperature maintaining at a point that ensures heat exchanger freezing protection. Compatible with round Ø125, 150, 160, 200, 250 and 315 mm air ducts.

Design

The casing and the control box are made of galvanized steel and the heating elements are made of stainless steel.

The heater casing is extra heat insulated with 20 mm non-flammable mineral wool layer.

The heater spigots are rubber sealed for airtight connection to the air ducts.

The NKP duct heaters are equipped with a power cable and a control cable for connection to a controller of an air handling unit.

Air temperature is controlled with a triac power controller that switches the maximum load on/off.

Load is commutated with a semiconductor (triac).

The heaters are equipped with overheat protection thermostats:

- ▶ self-resetting overheat protection thermostat actuated at +60 °C.
- ▶ emergency overheat protection thermostat actuated at +90 °C.

Mounting

The heater design ensures its connection to round air ducts by means of the clamps from the delivery set.

The arrow on the heater casing must match the air flow direction in the system.

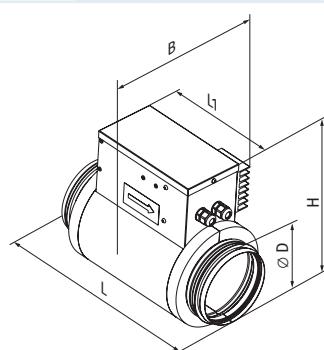

The heater is controlled by the ventilation unit through the cable supplied and already connected to the heater at the factory.

The control box cover must be directed upwards with the maximum deviation angle 90°.

The control box cover must not be directed downwards.

Overall dimensions

Model	Dimensions [mm]				
	Ø D	B	H	L	L1

Electric heater power selection diagram

Minimum temperature enabling efficient operation of the NKP freeze protection heater

How to use NKP electric heater diagrams

► Selection of the NKP heater model compatible with VUT 350 VB EC A21 air handling unit. The rated winter outside air temperature is -15 °C. The rated air flow is 220 m^3/h . Starting from the rated winter outside air temperature (1) draw a horizontal line till the air flow axis (2). The NKP heater with heating capacity 1200 W is able to provide efficient heat exchanger freeze protection.

► The NKP 160-1.2-1 with the diameter matching the spigot diameter of the VUT 350 VB EC A21 air handling unit is a suitable model.
